Health Current is the health information exchange (HIE) that helps partners transform care by bringing together communities and information across Arizona.

As Arizona’s HIE, Health Current fully integrates physical and behavioral health information, connecting a complete continuum of the Arizona healthcare community from hospitals, labs, health plans, community behavioral health and physical health providers to first responders, correctional facilities, and post-acute care and hospice providers.

More complete information is more meaningful and leads to better care and better outcomes. It makes healthcare transformation possible. That’s why we have worked for more than 11 years to become Arizona’s primary resource for health information technology and exchange, integrating health information with the delivery of care to improve individual and community wellbeing. Over the past 11+ years we have:

• Assisted more than 3,000 Arizona providers with the adoption and use of electronic health records (EHRs), and more recently assisted more than 2,500 providers in preparing for value-based care.
• Built and operated a technology platform that captures, shares and integrates actionable data, with a move in progress to transition to a next generation HIE solution.
• Integrated physical and behavioral health information and providers in one Arizona HIE that today includes over 630 participating organizations.

Health Current - the community partner that gives providers the health information they need for better clinical decisions, better outcomes and a healthier population.
Message from the Chief Executive Officer and Chairman of the Board

We are pleased to present to you *Fully Informed Health: The Path and the Progress*, the 2018 annual report and forward-looking perspective of Health Current, Arizona's integrated HIE.

This past year marked the third straight year of rapid growth in Health Current participation, with another 171 participants added in 2018 and nearly 500 participants added over the past three years. Our rapid growth caused us to accelerate plans to upgrade our HIE platform, and we completed our market analysis and moved forward with the selection of a next generation HIE platform and solution, the Health Data Hub (HDH) platform from NextGen.

The growth in 2018 not only expanded the size but also the breadth and diversity of Arizona's HIE. Two of the state's large health plans, Blue Cross Blue Shield of Arizona and CIGNA Healthcare of Arizona, joined Health Current, and while there was also growth in all sectors, two areas of strongest growth were in hospitals/health systems and long-term and post-acute care (LTPAC) organizations. Hospitals/health systems grew from 30 to 53 participants and nearly 100 LTPAC organizations were participating in Health Current by the end of the year. The growth of these two sectors not only increased the data that is supplied to Health Current but also enhanced the ability to track and coordinate transitions of care for critical high-needs patient populations across the state.

When we rebranded as Health Current two years ago, we adopted the tag phrase, *Imagine Fully Informed Health*, not as a description of who we are today but as a vision and beacon to guide us, our participants and our community.

Clinicians have always been able to make better decisions and provide better care with more complete patient information. This vision of more complete health information anchors our three-year strategic plan adopted at the same time, a plan that includes four pillars or strategic priorities. We are pleased to report our path forward and significant progress in each of these four areas:

- **Data integration**
  
  We have been able to integrate Health Current data into the workflows of our participants, with the completion of over 500 Portal or Alerts projects in 2018, improving participant clinical decision making and healthcare delivery.

- **Data acquisition**
  
  Substantial progress was made in the acquisition of additional data sources through the completion of 58 new interfaces, with another five interfaces completed in test and ready for go-live at year end.

- **Data quality**
  
  We have charted the path forward on the difficult work of data quality and data normalization, with the selection of a data quality vendor and Health Current Board of Directors approval of a formal data quality strategy.

- **Value-added services**
  
  With the guidance of our Clinical Advisory Council, we investigated the content and structure of potential value-added services and that work continues. In addition, in early 2019 we created a business development team that internally will continue to advance this work.

In a changing value-based healthcare market, we continue our commitment to transform care by bringing together clinical communities and meaningful information through improved care coordination and healthcare delivery.

Sincerely,

Melissa A. Kotrys, MPH  
*Chief Executive Officer*

David A. Dexter  
*Chairman of the Board*

Melissa A. Kotrys, MPH  
Chief Executive Officer

Melissa Kotrys is the Chief Executive Officer (CEO) for Health Current, the health information exchange (HIE) that helps partners transform care by bringing together communities and information across Arizona.

Ms. Kotrys currently serves as the Chair of the Maricopa Health Centers Governing Council and the Secretary of the Board for the national trade association of community and regional HIEs, the Strategic Health Information Exchange Collaborative (SHIEC). Ms. Kotrys is also Chair of the SHIEC Patient Centered Data Home™ (PCDH) Governance Council. In addition, Ms. Kotrys is on the North American Board of the Health Information and Management Systems Society (HIMSS). Prior to joining Health Current, Ms. Kotrys worked as a consultant and health policy analyst at Deloitte Consulting. Ms. Kotrys holds a Master’s in Public Health from George Washington University with a concentration in health policy, and a Bachelor of Arts from The University of North Carolina at Chapel Hill.

Who is Health Current?
HIE Participants as of May 1, 2019

- 286 Community Providers
- 103 Long-Term & Post-Acute Care
- 16 ACOs & Clinically Integrated Networks
- 54 Hospitals & Health Systems
- 80 Behavioral Health Providers
- 21 FQHCs & Rural Health Clinics
- 7 State & Local Government
- 6 Labs, Imaging Centers & Pharmacies
- 18 Emergency Medical Services
- 17 Health Plans
Rapid Growth and Progress Continue for Third Straight Year

Growth expands breadth and diversity of the HIE

Health Current continued a third straight year of rapid growth in participation in Arizona’s HIE, adding another 171 participants in 2018 and adding nearly 500 participants over the past three years. The 400th participant, Children’s Oasis Pediatrics joined the HIE in late 2017, and the 500th participant, Encompass Health Rehabilitation Hospital of Northwest Tucson joined in July, with a total of 565 participants by the end of 2018. This three-year increase is a growth rate of nearly 700 percent from the 76 participants that Health Current had at the end of 2015.

Two large commercial health plans, Blue Cross Blue Shield of Arizona and CIGNA Healthcare of Arizona joined the HIE in 2018. While Health Current’s close work with AHCCCS over the past three years is reflected in the participation of all Medicaid (AHCCCS) health plans, the addition of these two large plans is an indication of the value of Health Current in the commercial market.

Health Current’s growth included the addition of 23 hospitals and health systems, growing from 30 hospitals and health systems in 2017 to 53 in 2018. This growth was due primarily to increases in behavioral health, rehab and long-term care hospital participation.

Growth in data supplied and data use

The growth in participation also meant significant increases in connections to Health Current and in the data that is supplied and exchanged. A total of 58 new interfaces were completed in 2018 and another five interfaces were completed in test and ready for go-live. With the increase in completed interfaces, Health Current has seen a steady increase in the number of data sources, growing from 16 data sources in 2015, to 59 data sources at the end of 2017 to 113 data sources at the end of 2018. What this means as a practical matter, for example, is that data from more than 97 percent of all Arizona acute hospital emergency and inpatient admissions flows to Health Current and are a key source of data available to participants.

With more data sources, there is much more data to share, and many more participants were set up to receive data from Health Current in 2018. In 2018, Health Current implemented HIE Portal access and/or Alerts delivery for 182 participants, in addition to providing rework or adjustments for 26 Portal and Alerts projects. Much of the drive to set up participants for Portal access and/or Alerts delivery was driven by the AHCCCS Targeted Investment (TI) program that provides incentive payments for participating organizations that meet key milestones, including the HIE milestone of receiving data from Health Current. Of the more than 500 Portal and Alerts projects completed throughout 2018, 363 projects supported participating practices in the TI Program.

New HIE platform for the future

Health Current’s rapid growth over the past three years stressed the HIE platform that Health Current adopted in 2015 when there were just over 50 participants. As a result, Health Current initiated and completed an analysis of the HIE vendor market and selected NextGen’s new Health Data Hub (HDH) platform as the next generation HIE solution. Health Current plans to go-live with this new platform that will take Health Current and its participants into the future in late 2019.
Health Current “Champions” Recognized at the 2018 Summit & Trade Show

Health Current recognized an outstanding health IT leader and health IT organization at the Health Current Summit & Trade Show on December 4, 2018.

Peter Vermilyea, Clinical Applications Coordinator and Captain in the United States Public Health Service from Winslow Indian Health Care Center (WIHCC) received the 2018 Health Current Health IT Leader Award. Captain Vermilyea has over 20 years of service with Indian Health Services (IHS) and was instrumental in the early adoption of health IT and health information exchange by WIHCC. He manages the advanced use of HIE and created a model for IHS facilities, setting up 10 active patient panels consisting of high-risk patients and patients with specific diagnosis types.

Horizon Health and Wellness, a federally qualified health center (FQHC) and Practice Innovation Institute participant (see Pii, p. 7) received the Health Current Innovation Award as the outstanding health IT organization. Dr. Fred Karst, Chief Operating Officer, accepted the award for Horizon Health and Wellness. Horizon operates 12 clinics throughout central and southern Arizona, serving a patient population of 12,000 with a staff of 600. They have been using Health Current data to improve service to high-needs populations, such as serious mental illness (SMI) patients, reducing hospital utilization among all target groups and reducing emergency department visits by more than 25 percent and inpatient visits by more than 50 percent.

The 2018 Summit & Trade Show was held December 3-4, 2018 at the Renaissance Phoenix/Glendale Hotel and Spa, attracting more than 330 attendees.
Health Current featured a broad diversity of participants’ success stories in 2018. From a facility serving a large population of Native Americans in northern Arizona to an organization serving clients transitioning from jail, military service or homelessness in southern Arizona, Health Current participants are integrating HIE data into clinical and operational workflows, improving care, care coordination and outcomes.

Dr. Michael Stitzer along with other medical professionals of the Winslow Indian Health Care Center (WIHCC) have found a valuable resource in Health Current in their ability to manage epileptic and other high-needs patients across a broad rural area. WIHCC, located 60 miles east of Flagstaff, is a Tribal Contract or Compact Health Center with 400 specialists and medical professionals that serve an active patient population of 17,000 and a geographic area that includes more than 60,000 Native Americans in northern Arizona.

When North Country HealthCare started receiving Health Current Alerts in 2016, they had little idea of the impact it would have, much less that it could help intervene with life-saving care, according to Lori Pearlmuter, Quality Manager. Today, receiving Alerts in the right place at the right time has become an essential tool for care managers at North Country HealthCare, Pearlmuter said. North Country HealthCare faces a challenge simply by the size of the geographic area that it covers, serving 14 communities from Lake Havasu in the west to Springerville in the east, and from Payson in the south to the Grand Canyon in the north.

The journey can be difficult for someone returning from time in jail, time in active military service or time on the street. It is even more difficult when facing serious health issues. Old Pueblo Community Services (OPCS) provides valuable healthcare and other services for these vulnerable populations and has been able to improve care through connecting to Health Current. Over the past 20 years, OPCS has been helping their clients with a smoother transition back into the community and has seen tremendous growth. Today, OPCS provides behavioral health services and housing to over 430 clients including veterans, post-incarceration patients, homeless individuals and substance abusers, and is set up to receive Alerts on these clients. Every OPCS client is assigned a recovery coach who guides their client throughout their transition. OPCS utilizes three different types of Alerts from the HIE – outpatient, inpatient and emergency department (ED) Alerts.

After just the first week of access to the Health Current portal, Dr. Fred Karst, Chief Operations Officer at Horizon Health and Wellness, knew that Health Current was going to change the way they operate. In fact, Health Current has already helped them cut hospital admissions in half for their highest users. Serving a patient base of 12,000 with over 600 staff members, Horizon Health and Wellness offers mental health, behavioral health, and primary care services in 10 Arizona locations. After participating two years in the HIE, Horizon has been able to incorporate the services that Health Current offers into their everyday work-flow.

Lori Pearlmuter, Quality Manager, North Country HealthCare

“Alerts delivered in the right place at the right time not only assist in helping patients avoid readmission, they can even lead to life-saving care.”

Dr. Fred Karst, Chief Operations Officer, Horizon Health and Wellness

“I was shocked to learn how many of our patients were spending so much time in hospitals. We knew we had to do something about it.”
For the past three years, the Practice Innovation Institute (Pii) has worked with over 2,500 Arizona providers in achieving the five Phases of Transformation as part of the Centers for Medicare & Medicaid Services (CMS) Transforming Clinical Practice Initiative (TCPi). This national initiative aims to prepare clinicians for success in value-based care, and based on program accomplishments to date, Pii received approval for a 4th year of funding of $3.5 million, for a total of $14.6 million over the course of the 4-year grant.

A joint initiative of Health Current and Mercy Care, Pii has provided hands-on assistance to participating practices in meeting program aims. Pii has performed well, as measured against overall TCPi performance, including an estimated cost savings of $142 million thus far.

Patient Centered Data Home™ (PCDH) Expands to National Network

The Patient Centered Data Home™ (PCDH) initiative of the national collaborative of HIEs, SHIEC, made significant advancements in 2018, expanding to a national network with four regions connected through regional gateways. By the end of 2018, PCDH included 33 HIEs organized into four regions, the Western, Midwest, Central and Heartland regions. At the time of publication, PCDH included 42 HIEs as shown in the map below.

PCDH, a program first piloted by Health Current and a small group of western HIEs in 2016, is a cost-effective, scalable method of exchanging patient data among HIEs based on the triggering of episode alerts. These alerts notify providers that a care event has occurred outside of the patients’ “home” HIE area and confirm the availability and the specific location of the clinical data. This allows providers to initiate information exchange to access real-time information across state and regional lines and across the care continuum.

Through the national network, episode alerts are routed through regional hubs to a patient’s “home” HIE and real-time information exchange occurs through these regional gateways. The four regional gateways include Quality Health Network, Grand Junction, CO (Western); MyHealth Access Network, Tulsa, OK (Central); Missouri Health Connection, Columbia, MO (Midwest); and Indiana Health Information Exchange, Indianapolis, IN (Heartland).
Health Current continued a third straight year of explosive growth, adding nearly 500 participants over the past three years. Through grant-funded programs that have assisted in connecting new participants and bringing them onboard over this time, Health Current has developed a critical mass and foundation for the future. In addition, funding from the TCPI initiative of CMS allowed Health Current to operate the Practice Innovation Institute, in partnership with Mercy Care, to assist Arizona clinicians with practice transformation services that include participation in and use of the HIE. Health Current’s continued robust growth significantly increased both the amount of data as well as the breadth and types of data suppliers in the HIE, increasing the value of HIE data overall and laying the foundation for a vibrant and sustained future for Arizona’s HIE.

### Arizona Health IT and HIE Milestones

**2005**
- August 2005 - Gubernatorial executive order is issued to develop a Roadmap for HIT in Arizona. Hundreds of stakeholders from the public and private sector convene to develop the Roadmap.

**2007**
- January 2007 - Arizona Health-e Connection (AzHeC) incorporated as an independent, non-profit organization to spearhead state health IT efforts.
- March 2007 - AzHeC hosts its 1st annual Arizona Health-e Connection Summit bringing together healthcare professionals, IT professionals, companies and health IT vendors. This annual event becomes the largest health IT education and networking event in the state of Arizona.

**2008**
- January 2008 - Harvard Business Review case study publishes a review of the development and implementation of the Health-e Connection Roadmap, bringing national attention to Arizona health IT efforts.

**2010**
- April 2010 - AzHeC is awarded a $10.8 million grant (later increased to $11.9 million due to an expansion in scope) by the Office of the National Coordinator for Health Information Technology (ONC) to develop the Arizona Regional Extension Center (REC) to assist Arizona healthcare providers in adopting EHRs and achieving Meaningful Use.
- August 2010 - Meaningful Use Stage 1 seminars for healthcare providers and office staff are conducted around the state by the REC; over 500 attendees statewide.

**2011 - 2012**
- April 2011 - Supported by a broad base of community collaboration led in part of AzHeC, the Arizona Legislature passes HB 2620 which removed barriers to HIE, created regulations for HIOs and reinforced patient privacy related to HIE.
- February 2012 - REC reaches its goal of enrolling 1,958 primary care providers.
- December 2012 - AzHeC launches the Arizona E-Prescribing Initiative, a grant-funded program aimed at enhancing patient safety and healthcare through an increase in e-prescribing among Arizona providers and pharmacies.

### Acronyms/Abbreviations Guide

- **ADT**: Admissions, Discharges, Transfers
- **AHCCCS**: Arizona Health Care Cost Containment System
- **AzHeC**: Arizona Health-e Connection
- **CMS**: Centers for Medicare & Medicaid Services
- **EHR**: Electronic Health Record
- **EPCS**: Electronic Prescribing of Controlled Substances
- **HDH**: Health Data Hub
- **HHIS**: United States Department of Health and Human Services
- **HIE**: Health Information Exchange
- **HINAs**: Health Information Network of Arizona
- **HIO**: Health Information Organization
- **HIT**: Health Information Technology
- **ONC**: Office of the National Coordinator for Health Information Technology
- **OTP**: Opioid Treatment Program
- **PCDH**: Patient Centered Data Home™
- **PiI**: Practice Innovation Institute
- **PMP**: Prescription Monitoring Program
- **RBHA**: Regional Behavioral Health Authority
- **REG**: Regional Extension Center
- **RFP**: Request for Proposal
- **SHIP**: Statewide HIE Integration Plan
- **TCPi**: Transforming Clinical Practice Initiative
- **VBP**: Value Based Payment
